BILLING CODE 4410-18-P

DEPARTMENT OF DEFENSE

Department of the Army; Corps of Engineers

Intent to Prepare a Draft Environmental Impact Statement for the Neuse River Basin Feasibility Study, NC

AGENCY: Department of the Army, U.S. Army Corps of Engineers, DoD.

ACTION: Notice of intent.

SUMMARY: The Neuse River Basin is the third largest basin in North Carolina, encompassing a total area of about 6,235 square miles. The Neuse River originates in north central North Carolina and flows southeasterly until it reaches tidal waters of Pamlico Sound. Water quality in the Neuse River Basin has become degraded from multiple causes, including: Rapidly expanding urban growth with increasingly rapid runoff from storm events; deforestation; expanding high-density livestock operations; and aging wastewater infrastructure. Fish and wildlife populations have suffered declines in diversity and vigor; and waterborne fish diseases have now become apparent, especially *Pfiesteria*. The U.S. Army Corps of Engineers, Wilmington District, in cooperation with the State of North Carolina Division of Water Resources has initiated the Neuse River Basin Feasibility Study in North Carolina. The purpose of the feasibility study is to develop and evaluate basin wide alternatives to improve water quality, restore anadromous fish passage, wetlands, stream, riparian buffer, and oyster habitat. We will also investigate flood damage reduction. The focus of this study is to identify resource problems, needs, and opportunities and develop solutions. The feasibility study is being carried out under the Corps of Engineers General Investigation Program and is being conducted in response to a congressional resolution adopted July 23, 1997.

FOR FURTHER INFORMATION CONTACT: Questions about the proposed action and DEIS can be answered by: Mr. Hugh Heine; Environmental Resources Section; U.S. Army Engineer District, Wilmington; P.O. Box 1890; Wilmington, NC 28402-1890; telephone: (910) 251-4070.

SUPPLEMENTARY INFORMATION: This study will investigate the following alternatives: No action alternative, restoration of wetland and stream habitats as well as riparian buffers which serve as natural filtering systems, oyster habitat restoration, removal or modification of low head dams and culverts to restore anadromous fish
