Title of Collection: Grantee Reporting Requirements for the Research Experiences for Undergraduates (REU) Program.

OMB Approval Number: 3145-0224.

Expiration Date: June 30, 2025.

Overview of Information Collection: NSF's Research Experiences for Undergraduates (REU) program funds REU Site grants and REU Supplements to organizations to provide authentic research experiences and related training for postsecondary students in STEM fields.

All NSF Principal Investigators in all programs are required to submit annual and final project reports through the NSF Project Reports System in Research.gov. The REU Program Module is a component of the NSF Project Reports System that is designed to gather basic information about the pool of student applicants and participants in REU Site and REU Supplement projects. The information allows NSF to assess the demand and allocate resources for REU student positions within each discipline, to analyze the types of academic institutions and the educational levels represented by the participants, and to identify the participants for inclusion in periodic program evaluations.

NSF is committed to providing stakeholders with information regarding the expenditure of taxpayer funds on its investments in human capital, including activities such as REU Sites and REU Supplements. If NSF could not collect information about the students who participate in undergraduate research experiences, NSF would have no other means to consistently document the number and diversity of the participants or to identify the participants for inclusion in efforts that gauge the quality of programmatic activities and the long-term effects of the activities on the students. Without the REU Program Module, NSF also would not have information about the competitiveness of the REU opportunities, which informs the management of the program's budget.

Consultation With Other Agencies and the Public

This information collection is specific to a subset of NSF grantees. NSF has not consulted with other agencies but has gathered information from its grantee

community through attendance at PI conferences. A request for public comments will be solicited through announcement of data collection in the **Federal Register**.

Background

All NSF Principal Investigators are required to use the project reporting functionality in *Research.gov* to report on progress, accomplishments, participants, and activities annually and at the conclusion of their project. Information from annual and final reports provides yearly updates on project inputs, activities, and outcomes for use by NSF program officers in monitoring projects and for agency reporting purposes.

If project participants include undergraduate students supported by a Research Experiences for Undergraduates (REU) Sites grant or by an REU Supplement, then the Principal Investigator is required to complete the REU Program Module in addition to the questions in NSF's standard report template.

Respondents: Individuals (Principal Investigators).

Number of Principal Investigator Respondents: 3,900 annually.

Burden on the Public: 650 total hours.

Dated: January 29, 2025.

Reports Clearance Officer, National Science Foundation.
