

publish data using standard business size class categories and will research the expansion of additional size classes for publication, thus continuing to be responsive to stakeholders whose missions include supporting small business research, analysis and advocacy and reflecting numerous requests from data users to monitor economic trends impacting small businesses. As with other Census Bureau data products, detailed methodology and measures of quality will be published for BTOS data products. BTOS products will be based on representative samples drawn from the full universe of businesses, making them unique and the results reliable when compared to other high frequency business survey data such as those produced in the private sector.

Core content on the BTOS is used to create high frequency economic measures including inputs (for example, employment and hours), outcomes (for example, output prices) and conditions faced by businesses (for example, demand). Survey responses are used to create national level as well as industry and geographically detailed diffusions indexes which are easily interpretable as measures of change over time for these core measures. No other federal statistical data products exist which provide high frequency measures such as those produced by BTOS.

Frequency: Bi-weekly.
