9000–0152, Service Contracting.

B. Need and Uses

This justification supports an extension of OMB Control No. 9000–0152. This clearance covers the information that offerors must submit to comply with the following Federal Acquisition Regulation (FAR) requirement:

- FAR 52.237–10, Identification of Uncompensated Overtime. This provision requires offerors, when professional or technical services are acquired on the basis of the number of hours to be provided, to identify uncompensated overtime hours in excess of 40 hours per week, whether at the prime or subcontract level. This includes uncompensated overtime hours that are in indirect cost pools for personnel whose regular hours are normally charged direct.

The contracting officer will use the collected information to perform an adequate cost realism analysis of the offerors' proposed labor rates. Proposals which include unrealistically low labor rates, or which do not otherwise demonstrate cost realism, will be considered by the contracting officer in a risk assessment and evaluated appropriately. The primary purpose for obtaining the information and using it during the source selection process is to discourage the use of uncompensated overtime.

C. Annual Burden

Respondents: 19,738.

Total Annual Responses: 19,738.

SUPPLEMENTARY INFORMATION:**Proposed Project****TeamSTEPPS® Stakeholder Surveys for AHRQ’s ACTION III Diagnostic Safety Capacity Building Contract Task 3**

AHRQ awarded a contract to the MedStar Health Research Institute (MHRI) in 2019 and received OMB fast

track clearance (OMB control number 0935–0179, expiration date of 11/30/23), to provide program support and expertise related to improving diagnostic safety and quality across five distinct contract tasks. Task 3 of the contract is to develop, pilot test and promote a TeamSTEPPS® Course to improve communication among providers related to diagnosis. TeamSTEPPS® to Improve Diagnosis provides communication strategies, including methods to improve intra-professional communication and communication during the referral process and to practice mutual support and situation monitoring during the diagnostic process. TeamSTEPPS® to Improve Diagnosis includes an educational module for leaders on strategies to facilitate improved communication with and among providers related to diagnosis. This module also includes a Team Assessment Tool for Improving Diagnosis (the “Team Assessment Tool”).

The Team Assessment Tool is an instrument developed as a method of self-assessment, with the goal of helping teams reflect on their current diagnostic and teamwork practices. In addition, it orients them to the repertoire of tools available within the TeamSTEPPS for Improving Diagnosis course that are available to support improvement efforts. The Team Assessment Tool asks participants to complete self-assessment ratings as a mechanism to identify strengths and opportunities for improvement in unit-based teamwork. The unit level aggregate results of the assessments help unit leaders identify priorities for training via use of course modules and specific interventions with their diagnostic improvement teams.

AHRQ would like to further develop this Team Assessment Tool into a measurement instrument, expanding on its intended use as an educational activity and formative assessment. The opportunity to provide evidence (via publication in peer reviewed journals) that the tool is both valid and reliable will strengthen its acceptance in the care delivery community and provide a scientifically sound method for teams to assess changes in performance overtime. The Team Assessment Tool requires psychometric testing in order to ensure validity and reliability.

Psychometrics is the construction and validation of measurement instruments and assessing if these instruments are reliable (have consistency in measurement) and valid (have accuracy in measurement). Reliability and validity indicate how well a method,
