

BLM, with isolated 640-acre sections managed by the Utah School and Institutional Trust Lands Administration. The proposed project would be designed to produce 300,000 tons of potash per year in the form of K₂SO₄ or sulphate of potash (SOP), for a total estimated production (over the anticipated minimum project life of 30 years) of 9 million metric tons of SOP.

An operating plan for mining (Mining Plan) for the Sevier Playa Project, prepared by Peak Minerals, describes the project in detail and is available at the BLM Fillmore Field Office. As described in the Mining Plan, brine would be extracted from beneath the playa surface by extraction trenches and wells. Enhanced aquifer recharge would be implemented to support the hydraulic head necessary to maintain target extraction rates. Extracted brine would be transferred to concentration ponds to concentrate and precipitate the resource through solar evaporation. Potash salts would be harvested and stockpiled, then crushed to reduce particle size. Scrubbing and flotation would separate potassium-rich salts from other materials contained in the precipitate. Crystallization processes would further refine the product to meet purity specifications.

The project facilities would include ponds, wells, a processing facility, power line, gas line, rail facility, freshwater well, and access roads. The site would be accessed via state highways on the north and east sides. To the extent possible, existing roads would be used for access for construction and maintenance. Power would be brought in from the north end of the playa via a new power line. The fresh water supply would come from a well supply due south of the plant site, while the natural gas supply line would be brought from a supply point east of the plant site. The main substation would be located on the northwest corner of the processing plant. An administration building and combined equipment shop, maintenance area, and warehouse would be constructed.

The purpose of the public scoping process is to determine relevant issues that will influence the scope of the environmental analysis, including alternatives, and guide the process for developing the EIS. At present, the BLM has identified the following preliminary issues: Air quality, water quality and water rights, traffic and usage of secondary roads, on-site and compensatory mitigation, and wildlife concerns. The BLM will use NEPA public participation requirements to assist the agency in satisfying the public involvement requirements under

Section 106 of the National Historic Preservation Act (NHPA) (16 U.S.C. 470f) pursuant to 36 CFR 800.2(d)(3). The information about historic and cultural resources within the area potentially affected by the proposed Sevier Playa Project will assist the BLM in identifying and evaluating impacts to such resources in the context of both NEPA and Section 106 of the NHPA. The BLM will consult with Indian tribes on a government-to-government basis in accordance with Executive Order 13175 and other policies. Tribal concerns, including impacts on Indian trust assets and potential impacts to cultural resources, will be given due consideration. Federal, State, and local agencies, along with tribes and other stakeholders that may be interested in or affected by the proposed Sevier Playa Project that the BLM is evaluating, are invited to participate in the scoping process and, if eligible, may request or be requested by the BLM to participate in the development of the environmental analysis as a cooperating agency.
