SUPPLEMENTARY INFORMATION: The purpose of NUREG/CR-6931 Volume 1 entitled "CAROLFIRE Test Report Volume 1: General Test Descriptions and the Analysis of Circuit Response Data, Draft for Public Comment," is to document the fire test data taken during the *Cable Response to Live Fire* (CAROLFIRE) testing program to resolve "Bin 2 items" identified in Regulatory Issue Summary (RIS) 2004-03. RIS 2004-03 clarifies the scope of regulatory

compliance inspections related to post-fire safe shutdown circuit analysis, and specifically, the cable failure modes effects analysis including spurious operation of plant equipment. The relevant Bin 2 items represent those cable failure mode configurations for which current data and understanding were lacking when the RIS was issued; CAROLFIRE provides that data.

The purpose of NUREG/CR-6931 Volume 2 entitled "CAROLFIRE Test Report Volume 2: Cable Fire Response Data for Fire Model Improvement, Draft for Public Comment—Revision 1," is to document the fire data taken during the CAROLFIRE program to foster the development of tailored cable thermal response and electrical failure fire modeling tools. This represents an extension of ongoing NRC fire model Verification and Validation efforts that address a recognized gap in current fire modeling capabilities.

The NRC is seeking public comment in order to receive feedback from the widest range of interested parties and to ensure that all information relevant to developing this document is available to the NRC staff. These documents are issued for comment only and are not intended for interim use. The NRC will review public comments received on the documents, incorporate suggested changes as necessary, and issue the final NUREG/CR-6931 Volumes 1 and 2 for use.

Dated at Rockville, MD, this 21st day of May 2007.

For the Nuclear Regulatory Commission.

Mark A. Cunningham,

Director, Division of Fuel, Engineering and Radiological Research, Office of Nuclear Regulatory Research.
