Permit No. 1579: On May 26, 2006, notice was published in the **Federal Register** (71 FR 30385) that a request for a scientific research permit to take shortnose sturgeon had been submitted by Alden Research Laboratory, Inc. Alden will perform research on entrainment and impingement rates for selected bar rack and bypass configurations in attempt to identify design criteria for a downstream passage facility at the Hadley Falls Hydroelectric Project on the Connecticut River. The applicant will use captive-bred sturgeon and all testing will take place in the Alden Lab testing flume. During the first year of the permit up to 70 sturgeon will be transported from hatcheries, measured, handled, Passive Integrated Transponder tagged, and participate in the flume testing. During the remaining four years up to 200 sturgeon will participate in the study annually. At the end of the five-year study the sturgeon will be sacrificed.

The North Carolina Zoological Park will use ten captive-bred, non-releaseable shortnose sturgeon from the U.S. Fish and Wildlife Service's Warm Springs National Fish Hatchery for the purposes of educational display. The proposed projects to display endangered cultured shortnose sturgeon respond directly to a recommendation from the NMFS recovery plan outline for this species. These sturgeon displays will be used to increase public awareness of the shortnose sturgeon and its status. The proposed projects will educate the public on shortnose sturgeon life history and the reasons for the species decline. The permits are issued for 5 years.

Issuance of these permits, as required by the ESA, was based on a finding that these permits (1) Were applied for in good faith, (2) will not operate to the

disadvantage of such endangered or threatened species, and (3) are consistent with the purposes and policies set forth in section 2 of the ESA.
