

redress processes. TSA also has made non-substantial changes to the application, correcting a typo and changing the phrase "Name of Entry into the U.S." to "Name at Entry into the U.S."

DHS estimates completing the form, and gathering and submitting the information will take approximately 0.5 hours. The annual respondent population was derived from data contained within the DHS case management database and reflects the actual number of respondents for the most recent calendar year. The estimated annual number of burden hours for passengers seeking redress, based on 26,000 annual respondents, is 13,000 hours ($26,000 \times 0.5$ hours). DHS estimates 10 percent of the 26,000 respondents completing the form will complete the two surveys to share details of their application experience. The completion of the surveys will take approximately 7 minutes (Survey 1, 5 minutes + Survey 2, 2 minutes), giving an estimated annual number of burden hours as 303 ($2,600 \times .1167$). The total estimated annual number of burden hours for this collection is 13,303 ($13,000 + 303$) hours.

Abstract: The USGS administers the National Ground-Water Monitoring Network (NGWMN) which was developed through work with the Federal Advisory Committee on Water Information (ACWI) and its Subcommittee on Ground Water (SOGW). This network is required as part of Public Law 111-11, Title IX, Subtitle F—Secure Water, section 9507, “Water Data Enhancement by United States Geological Survey,” codified at 42 U.S.C. 10367.

The NGWMN consists of an aggregation of wells and springs from existing Federal, State, Tribal, and local groundwater monitoring networks. To support data providers for the NGWMN, the USGS will be providing funding through cooperative agreements to water-resource agencies that collect groundwater data.

The USGS will be soliciting applications for funding that will request information from the agency collecting the data. Elements will include contact information (phone number and email address), and a proposal describing their proposed work in support of the NGWMN. The proposal will describe the groundwater networks to be included in the NGWMN, the purpose of the networks, and the principal aquifers that are monitored. Proposals may include work to become a new data provider to the NGWMN, support for maintaining connections to agency databases, and work to enhance NGWMN sites (updating metadata, well maintenance, well drilling, and support for continuous water-level monitoring equipment). Proposals require estimates of costs to complete the above tasks and a timeline for planned completion. The proposals will be reviewed by the USGS and the NGWMN Program Board who will make funding recommendations.
