

method that the NRC staff finds acceptable for meeting the regulatory requirements of Title 10 of the Code of Federal Regulations (10 CFR) part 70, "Domestic Licensing of Special Nuclear Material" for mixed oxide fuel fabrication facilities.

Subpart H of 10 CFR part 70, "Additional Requirements for Certain Licensees Authorized To Possess a Critical Mass of Special Nuclear Material," identifies risk-informed performance requirements for mixed oxide fuel fabrication facilities. Subpart H requires applicants to establish and maintain a safety program that includes an integrated safety analysis (ISA), process safety information, and management measures and to submit a description of the safety program as part of the license application. Subpart H of 10 CFR part 70 also requires the applicant to submit an ISA summary to the NRC for approval.

This guide directs the reader to documentation regarding the type of information acceptable to the NRC staff for review of a license application and ISA summary for a mixed oxide fuel fabrication facility. Applicants may choose to submit information supporting the license application in the form of a safety analysis report (SAR), which may be a separate report submitted as part of the application or may be integrated into the license application. This documentation also provides guidance for acceptable format and content for licensing documents submitted as part of an application to construct, use, or possess special nuclear material or modify licensing commitments for a mixed oxide fuel fabrication facility.
