

exposure, and history of viable fishing grounds. NEFSC and project participants have been working to develop and test ropeless gear technology since 2019. To date, there have been no premature releases of the gear. Smart Buoy technology would be used to send an automated electronic notification to an email list within approximately 20 minutes of surfacing in the event of an unintended release. The mail list includes the Principal Investigator, Lori Caron, and Eric Matzen, NEFSC, who would immediately notify enforcement and

any on-the-water marine patrol, research, and/or rescue efforts. Positioning will be tracked in real time and recovery would occur as soon as possible. The gear would be transported ashore for assessment. For a map of the areas where sampling would occur, please see Figure 1.

Soak time would be no longer than 14 days, gear retrieval would be limited to daylight hours, and gear would not be set or retrieved when right whales are in close proximity, to further minimize any potential interactions with right whales. Sampling would occur from the date the

permit is issued, through the end of the closure on April 30, 2022. Pioneers estimated that there would be approximately 117 hauls of the ropeless gear. Data would be collected with data sheets developed by the NEFSC to ensure consistency among and between different ropeless fishing projects. This project would also collect whale sighting data. NEFSC staff would assist with data recording, when available. The outcome of this project would be to inform discussions on the utility of ropeless gear to allow potential fishing access to vertical line closure areas.

Figure 1: Map of Discrete Sampling Areas in the MBRA

Participants would adhere to additional precautions to mitigate concerns regarding enforcement, gear identification and retrieval, and protected species interactions including:

- Unique marking of ground lines and on-demand vertical lines beyond the regional requirements and the on-demand vertical line would be supervised while in the water column at all times;
- Unique flag would be flown by participating vessels for enforcement recognition;
- Weekly mandatory gear loss and gear conflict reporting;
- Stored vertical lines would be enhanced with weak links every 40 feet and are designed to break at less than 1700 lb (771 kg);
- Participating vessels would operate at a 10-knot (18.5 kph) speed limit and, if within a 500 yard (457.2 m) buffer zone of a surfacing right whale, would

immediately depart the area at a safe, slow speed;

- Weekly communication with Massachusetts Division of Marine Fisheries and NEFSC on project activities; and,
- Use of the Trap Tracker application for retrieval and set positioning of trawls. This information would be accessible to Federal, state, and corresponding enforcement personnel, as requested.

If approved, the applicant may request minor modifications and extensions to the EFP throughout the year. We may grant EFP modifications and extensions without further notice if they are deemed essential to facilitate completion of the proposed research and have minimal impacts that do not change the scope or impact of the initially approved EFP request. The EFP would prohibit any fishing activity

conducted outside the scope of the exempted fishing activities.
