SUPPLEMENTARY INFORMATION: Regulation 30 CFR 57.5040 requires mine operators to calculate and record individual exposures to radon daughters on MSHA Form 4000-9 "Record of Individual Exposure to Radon Daughters". The calculations are based on the results of the weekly sampling required by 30 CFR 57.5037. Records must be maintained by the operator and submitted to the MSHA annually. The sampling and recordkeeping requirement alerts the mine operator and the MSHA to possible failure in the radon daughter control system, and permits appropriate

corrective action to be taken in a timely manner. Data submitted to the MSHA is intended to establish a means by which the MSHA can assure compliance with underground radiation standards and to assure that miners can, on written request, have records of cumulative exposures made available to them or their estate, and to medical and legal representatives who have obtained written authorization.

ACTION: Notice.

SUPPLEMENTARY INFORMATION: The MSHA issues certifications, qualifications, and approvals (licenses) to the nation's miners to conduct specific work within mines. Prior to the approval of this collection Social Security Numbers (SSNs) were used for tracking purposes within MSHA data processing systems, in the absence of other reliable identification systems. In the effort to reduce use of SSNs both by the MSHA and third parties, the MSHA has changed the process to one in which miners requiring a license or benefit from the MSHA will register for a MIIN. This unique number is used in place of individual SSNs for all licensing requirements within the MSHA. This process has allowed the MSHA to discontinue the past practice of individuals supplying their personally identifiable information to instructors, states or other entities, which in turn supplied that information to the MSHA. Miners needing a license or benefit from the MSHA will need to register only one time to obtain their MIINs.
