

Proposed Alternatives are located almost entirely within the El Paso Natural Gas multi-use utility corridor. The Final EIS addresses in detail the direct, indirect, and cumulative impacts for a suite of alternatives. The BLM identified a portion of Alternative A, the applicant proposed action, in combination with Sub-Alternative G, as the BLM Preferred Alternative. It would be approximately 15 miles long; and include approximately 10 miles of BLM-administered land, 1 mile of State land, and 4 miles of private land.

Sub-Alternative G provides an alternative alignment for approximately 3 miles of Alternative A at the south end of the Parkway. It is the route that has the least impact on resources and infrastructure in the area.

Best management practices, standard operating procedures and application proposed measures to avoid and minimize impacts would be implemented by the applicant during construction, reclamation, and operation of the Parkway. To comply with Section 106 of the National Historic Preservation Act, the BLM consulted with the Arizona State Historic Preservation Office and potentially affected Indian tribes, and executed a Programmatic Agreement to address possible adverse effects from the Parkway.

Comments on the Draft EIS pertained to a variety of issues including: Potential impacts from groundwater drawdown, possible socioeconomic impacts to the local communities, and impacts to wildlife and other natural resources. Substantive comments are addressed in the Final EIS. Public comments resulted in the addition of clarifying text, but did not substantially change the proposed project or alternatives between the Draft and Final EIS.
