

Research Set-Aside (RSA) projects submitted by the Coonamessett Farm Foundation that have been favorably reviewed. The exemptions would allow six commercial fishing vessels to exceed the crew size regulations at 50 CFR 648.51(c) in order to place a researcher on the vessel, and temporarily exempt the participating vessels from possession limits and minimum size requirements specified in 50 CFR part 648, subsections B and D through O, for sampling purposes only. Any fishing activity conducted outside the scope of the exempted fishing activity would be prohibited, including landing fish in excess of a possession limit or below the minimum size.

Experimental fishing activity would test gear modifications in an attempt to reduce finfish bycatch in the dredge fishery. The gear modifications that would be tested adhere to current scallop gear regulations and include: A no-chaffing gear dredge bag; a five-row apron without chaffing gear and a 1.5:1 twine top hanging ratio; and a "daylight skirt," which would replace the rings in the skirt with three rows of 12-inch (30.48-cm) square mesh and chain. All trips would take place in scallop fishing areas open to the entire Atlantic sea scallop fishery.

Exemption from crew size limits is needed because a research technician would accompany vessels on the compensation fishing trips to collect catch data associated with different dredge modifications. The crew size exemption would be for approximately 40 days-at-sea and must be used in conjunction with a valid compensation fishing letter of authorization. The additional crew would only engage in data collection activities, and would not process catch to be landed for sale. Exemption from possession limit and minimum sizes would support catch sampling activities, and ensure the vessel is not in conflict with possession regulations while collecting catch data. All catch above a possession limit or below a minimum size would be discarded as soon as practicable following data collection.

For all trips, scallop catch would be evaluated by the number of baskets caught and a total catch weight would be obtained by the researcher. Total weight of bycatch species and individual measurements to the nearest centimeter would also be obtained by the researcher. If the volume of the catch is large, subsampling protocols would be necessary. All bycatch would be returned to the sea as soon as practicable following data collection.

All research trips would otherwise be consistent with normal commercial

fishing activity and catch would be retained for sale.

If approved, the applicant may request minor modifications and extensions to the EFP throughout the year. EFP modifications and extensions may be granted without further notice if they are deemed essential to facilitate completion of the proposed research and have minimal impacts that do not change the scope or impact of the initially approved EFP request. Any fishing activity conducted outside the scope of the exempted fishing activity would be prohibited.
