

toward the elimination of health disparities in the U.S. The OMWH proposes to conduct a survey for the purpose of obtaining baseline data on the racial, ethnic, and gender composition of both users and staff at its supported programs.

Numerous studies have shown that women and people of diverse racial and

ethnic background are more comfortable seeking and receiving health care from providers of their same gender, race, and ethnic background. These studies suggest that women and people of diverse race/ethnicity perceive that their health care is more attuned to their unique health and psychosocial circumstances when diverse providers

are available to them. A diverse workforce in BPHC supported programs may contribute significantly to the reduction of a significant psychological barrier to health care for many women and people of color.

The burden estimate for this project is as follows:

Form	Number of respondents	Responses per respondent	Total responses	Hours per response	Total hour burden
Center Directors .....	150	1	150	.25	38
Center Staff .....	<sup>1</sup> 150	28	4200	.08	336
Total .....			4350		374

<sup>1</sup> Sites.

## DEPARTMENT OF HEALTH AND HUMAN SERVICES

### National Institutes of Health

#### National Heart, Lung, and Blood Institute; Proposed Collection; Comment Request; Multi-Ethnic Study of Atherosclerosis (MESA) Event Surveillance

**SUMMARY:** In compliance with the requirement of section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995, for opportunity for public comment on proposed data collection projects, the National Heart, Lung, and Blood Institute (NHLBI), the National Institutes of Health (NIH) will publish periodic summaries of proposed projects to be submitted to the Office of Management and Budget (OMB) for review and approval.

### Proposed Collection

*Title:* Multi-Ethnic Study of Atherosclerosis (MESA) Event Surveillance. *Type of Information Request:* New. *Need and Use of Information Collection:* The study, MESA, will identify and quantify factors associated with the presence and progression of subclinical cardiovascular disease (CVD)—that is, atherosclerosis and other forms of CVD that have not produced signs and symptoms. The findings will provide important information on subclinical CVD in individuals of different ethnic backgrounds and provide information for studies on new interventions to prevent CVD. The aspects of the study that concern direct participant evaluation received a clinical exemption from OMB clearance (CE-99-11-08) in April 2000. OMB clearance is being sought for the contact of physicians and participant proxies to obtain information about clinical CVD events that participants experience during the follow-up period. *Frequency of response:* Once per CVD-event. *Affected public:* Individuals. *Types of Respondents:* Physicians and selected proxies of individuals recruited for MESA. The annual reporting burden is as follows: *Estimated Number of Respondents:* 555; *Estimated Number of Responses per respondent:* 1.0; and *Estimated Total Annual Burden Hours Requested:* 42.

There are no capital, operating, or maintenance costs to report.

Type of respondents	Estimated number of respondents	Estimated number of responses per respondent	Average burden hours per response	Estimated total annual burden hours requested
Physicians .....	279	1.0	0.20	19
Participant proxies .....	276	1.0	0.25	23
Total .....	555	1.0	0.225	42
