

accounts for 8.5% of the RfD. For acute exposure at the 95th percentile (based on a conservative Tier 2 assessment) the exposure was 0.018211 mg/kg/day (15.8% aPAD), for children 1–6 and 0.013429 mg/kg/day (11.9% aPAD) for non-nursing infants. There are no residential uses of indoxacarb and contamination of drinking water is extremely unlikely. Based on the completeness and reliability of the toxicity data, the lack of toxicological endpoints of special concern, the lack of any indication that children are more sensitive than adults to indoxacarb, and the conservative exposure assessment, there is a reasonable certainty that no harm will result to infants and children from the aggregate exposure of residues of indoxacarb, including all anticipated dietary exposure and all other non-occupational exposures. Accordingly, there is no need to apply an additional safety factor for infants and children.

F. International Tolerances

To date, no international tolerances exist for indoxacarb.
