It also informs the student and parent or guardian of the resources available should an incident take place that requires assistance and or reporting.

SUPPLEMENTARY INFORMATION:

Title; Associated Form; and OMB Number: Penile Implant Satisfaction in a Military Population; OMB control number 0720-PISM.

Needs and Uses: Inflatable Penile Prostheses (IPPs) are common procedures worldwide with over 53,000 American men aged ≥65 years-old undergoing penile implant surgery over a 9-year period. Despite the prevalence of these surgeries, the data on patient satisfaction has been limited. For example, Akakpo et al. (2017) evaluated almost 50 articles on patient satisfaction with penile implants from 2006–2016. 44% of the articles used questionnaires that were not intended for nor validated in IPP patients, while the remaining articles used proprietary, non-validated questionnaires.

These earlier IPP outcome assessments are problematic. The use of different instruments makes it difficult to compare results between studies. Thus, it is unsurprising that the satisfaction results vary widely. For example, one study found that 91% of IPP patients were 'very satisfied' whereas another study showed only 69% of men were satisfied with their IPP. This demonstrates the importance of a standardized IPP satisfaction questionnaire.

Recently, the first English-validated IPP satisfaction questionnaire- the Satisfaction Survey for Inflatable Penile Implant (SSIFI) was developed. This 16-item questionnaire assesses overall satisfaction, pain, function and appearance in men with IPPs. With the advent of SSIFI, it is vital that we use this novel instrument to accurately access IPP satisfaction in a military population.

The respondents are adult men with inflatable penile implants who are
