New Application Received

Permit 1386

The Washington Department of Ecology at Olympia, WA (WDOE) requests a five year permit for annual takes of adults and juveniles all of the ESA-listed anadromous fish ESUs in the state of Washington associated with a research project proposed to occur in various streams and tributaries throughout the state. The objective of the research is to investigate the occurrence and monitor the concentrations of toxic contaminants in edible fish tissue and the freshwater environments of the state as part of the Washington State Toxics Monitoring Program. The proposed project responds in part to the state's responsibility for protecting residents from the health risks associated with the consumption of contaminated, non-commercially caught fish. In addition, the proposed project responds to requirements of the federal Clean Water Act. The proposed project will help determine whether selected waters meet state water quality standards for toxic contaminants in fish as well as providing information about risks to humans and wildlife from the consumption of fish. Potential benefits to ESA-listed species as a result of the project may include the development of pollution control actions such as habitat improvements and/or the reduction or removal of the sources of toxic contaminants. Up to 20 adults and up to 100 juveniles from each ESA-listed fish ESU in Washington state are proposed to be captured annually (using nets, seines, or electrofishing), sampled for biological information, and released. Up to 2 percent of the ESA-listed juvenile fish proposed to be handled by WDOE researchers may be killed unintentionally.

Modification Requests Received

Permit 1291—Modification 1

The U.S. Geological Survey at Cook, WA (USGS) requests modification 1 to scientific research permit 1291. Permit 1291 authorizes USGS annual takes of ESA-listed anadromous fish juveniles associated with a research project that is being conducted at John Day, The

Dalles, and Bonneville Dams on the lower Columbia River in the Pacific Northwest. The purpose of the research is to monitor juvenile fish movement, distribution, behavior, and survival from John Day Dam downstream past Bonneville Dam using radiotelemetry technology. The research will benefit ESA-listed fish species by providing information on spill effectiveness, forebay residence times, and guidance efficiency under various flow regimes that will allow federal resource managers to make adjustments to bypass/collection structures to optimize downriver migrant survival at the hydropower projects. For modification 1, USGS requests an increase in the annual take of juvenile, endangered, SnR sockeye salmon associated with the research. The take increase is requested because the number of outmigrating sockeye salmon juveniles present in the mainstem Columbia River has increased substantially in recent years due to an increase in hatchery production from the Idaho Department of Fish and Game's captive broodstock program. Each year, up to 170 ESA-listed sockeye salmon juveniles are proposed to be captured by USGS from the juvenile bypass facilities at the dams, sampled for biological information, and released. Up to 3 percent of the ESA-listed juvenile fish proposed to be handled by USGS researchers and/or their designated agents may be killed unintentionally. The permit modification is requested to be valid for the duration of the permit which expires on December 31, 2006.

Permit 1322—Modification 1

On April 12, 2002, NMFS published a notice in the **Federal Register** (67 FR 17970) that the Northwest Fisheries Science Center at Seattle, WA (NWFSC) requested modification 1 to scientific research permit 1322. For modification 1, NWFSC requested additional annual takes of ESA-listed anadromous fish associated with a research project that is being conducted in the lower Columbia River estuary. NMFS has received an amended application for a permit modification from USGS. In addition to the takes designated in the April 12, 2002 notice, USGS is requesting additional annual lethal takes of up to 38 juvenile, endangered, naturally produced and artificially propagated, UCR spring chinook salmon; up to four juvenile, threatened, artificially propagated, SnR spring/summer chinook salmon; up to 3 juvenile, threatened, UWR chinook salmon; and up to 400 juvenile, threatened, CR chum salmon associated with the research. Modification 1 is requested to be valid

for the duration of the permit which expires on December 31, 2006.

Committee for the Implementation of Textile Agreements

June 20, 2002.

Commissioner of Customs,
Department of the Treasury, Washington, DC 20229.

Dear Commissioner: This directive amends, but does not cancel, the directive issued to you on November 8, 2001, by the Chairman, Committee for the Implementation of Textile Agreements. That directive concerns imports of certain cotton and wool textile products in the following categories, produced or manufactured in Colombia and exported during the twelve-month period which began on January 1, 2002 and extends through December 31, 2002.

Effective on June 25, 2002, you are directed to adjust the limits for the following categories, as provided for under the Uruguay Round Agreement on Textiles and Clothing:

Category	Adjusted twelve-month limit ¹
315	34,863,178 square meters.
443	146,252 numbers.

¹ The limits have not been adjusted to account for any imports exported after December 31, 2001.

The Committee for the Implementation of Textile Agreements has determined that these actions fall within the foreign affairs exception to the rulemaking provisions of 5 U.S.C. 553(a)(1).

Sincerely,
James C. Leonard III,
Chairman, Committee for the Implementation of Textile Agreements.
