AGENCY: Animal and Plant Health Inspection Service, USDA.

ACTION: Notice.

SUMMARY: We are advising the public that the Animal and Plant Health Inspection Service has prepared an environmental assessment for a proposed controlled field release of genetically engineered clones of *Eucalyptus* hybrids. The purpose of this release is to continue research on two constructs that confer cold-tolerance from a previously approved notification and test the efficacy of a third, claimed as confidential business information. We are making the environmental assessment available to the public for review and comment.

SUPPLEMENTARY INFORMATION: The regulations in 7 CFR part 340, “Introduction of Organisms and Products Altered or Produced Through Genetic Engineering Which Are Plant Pests or Which There Is Reason to Believe Are Plant Pests,” regulate, among other things, the introduction (importation, interstate movement, or release into the environment) of organisms and products altered or produced through genetic engineering that are plant pests or that there is reason to believe are plant pests. Such genetically engineered organisms and products are considered “regulated articles.” A permit must be obtained or a notification acknowledged before a regulated article may be introduced. The regulations set forth the permit application requirements and the notification procedures for the importation, interstate movement, or release in the environment of a regulated article.

On November 21, 2006, the Animal and Plant Health Inspection Service (APHIS) received a permit application (APHIS No. 06–325–111r) from ArborGen, LLC, in Summerville, SC, for a controlled field release of genetically engineered *Eucalyptus* hybrids. Under this permit, trees planted under a previously approved notification (05–256–03n) would be allowed to flower.

Permit application 06–325–111r describes *Eucalyptus* trees engineered with three constructs. Two of these constructs are intended to confer cold tolerance and the third genetic construct is claimed as confidential business information (CBI). In addition, the trees have been engineered with a selectable marker gene, also claimed as CBI. These DNA sequences were introduced into *Eucalyptus* trees using disarmed *Agrobacterium tumefaciens*. The subject *Eucalyptus* trees are considered regulated articles under the regulations in 7 CFR part 340 because they were created using donor sequences from plant pests.

To provide the public with documentation of APHIS’ review and analysis of any potential environmental impacts and plant pest risks associated with the proposed release of these *Eucalyptus* trees, an environmental assessment (EA) has been prepared. The EA was prepared in accordance with (1) The National Environmental Policy Act of 1969 (NEPA), as amended (42 U.S.C. 4321 *et seq.*), (2) regulations of the Council on Environmental Quality for implementing the procedural provisions of NEPA (40 CFR parts 1500–1508), (3) USDA regulations implementing NEPA (7 CFR part 1b), and (4) APHIS’ NEPA Implementing Procedures (7 CFR part 372).

The EA may be viewed on the Regulations.gov Web site or in our reading room. (Instructions for accessing Regulations.gov and information on the location and hours of the reading room are provided under the heading **ADDRESSES** at the beginning of this notice.) In addition, copies may be obtained by calling or writing to the individuals listed under **FOR FURTHER INFORMATION CONTACT**.

Done in Washington, DC, this 18th day of April 2007.
