I. Abstract

Ecosystem goods and services are defined by ecologists as the biophysical processes that give rise to social benefits. For example, in ecology, processes such as nutrient cycling, atmospheric regulation, pollination, and seed dispersal are considered ecosystem services. Indirect benefits are also considered; for example, recreation, avoided flood damage, and aesthetic benefits are also ecosystem services. In short, the benefits associated with an ecosystem service are the value that humans derive from that service. The objectives of this survey are to illustrate the various approaches that are being used to formulate ecosystem services projects and the state-of-the-art processes through which projects are implemented. The survey will gather

information concerning: methods used in ecosystem services projects, motivations for conducting projects, degree of project implementation, management actions resulting from project results (for completed projects), and characteristics of projects that have successfully implemented ecosystem services concepts.
