Abstract: The National Park Service (NPS) Social Science Program (SSP) is authorized by 54 U.S.C. 100701 to collect information that will improve the ability of the NPS to provide state-of-the-art management, protection, and interpretation of, and research on, the resources of the System. However, the data currently available from survey research is insufficient for generalizing findings across all national park units in the System with regards to visitor experiences, attitudes, and spending behaviors. Past and present socioeconomic research in NPS units do not allow for comparison across units or against a regional and nationwide benchmark of information. Without this data, local, regional, and national-level NPS managers lack a comprehensive understanding of visitor demographics, economic contribution, and visitation related experiences in park units needed to monitor how well the System is serving the public. In 2016, the NPS SSP conducted a pilot study in 14 NPS units to identify and better understand the need for more advanced socioeconomic monitoring. The pilot study produced and verified a study design that will allow SSP to fully implement a Socioeconomic Monitoring Study (SEM). Building on the findings from the pilot study, the SEM will collect information from visitors at 30 National Park units annually to provide generalizable results for NPS managers and planners across the System to understand and monitor: visitor demographics, economic contribution, services, facilities, and infrastructure investments. Park units will be able to compare their unit data with regional and national-level data to make informed decisions in future planning and management efforts.
