[Project No. 15387–000]

HGE Energy Storage 4, LLC; Notice of Preliminary Permit Application Accepted for Filing and Soliciting Comments, Motions To Intervene, and Competing Applications

On December 27, 2024, HGE Energy Storage 4, LLC, filed an application for a preliminary permit, pursuant to section 4(f) of the Federal Power Act (FPA), proposing to study the feasibility of the Lake Shasta Pumped Storage Project to be located in Shasta County, California, adjacent to Shasta Lake (reservoir), approximately 5.5 miles northwest of the city of Shasta Lake. The proposed project would occupy federal land managed by the U.S. Forest Service and the Bureau of Reclamation. The sole purpose of a preliminary permit is to grant the permit holder priority to file a license application during the permit term. A preliminary permit does not authorize the permit holder to perform any land-disturbing activities or otherwise enter upon lands or waters owned by others without the owners' express permission.

The proposed pumped storage hydropower project would consist of: (1) the existing Shasta Lake as a lower reservoir; (2) a new upper reservoir with a surface area of 16 acres and a storage volume of 3,150 acre-feet at a maximum water-surface elevation of 3,000 feet mean sea level (msl); (3) four 9,000-foot-long, 10-foot-diameter steel-lined penstocks to connect the reservoir to the powerhouse; (4) a 250-foot-long, 75-foot-wide, 100-foot-high, steel-reinforced concrete powerhouse constructed 100 feet below ground level, with four 280-megawatt (MW) reversible variable-speed pump-turbines, with a combined installed capacity of 1,120-MW; (5) a 100-foot-high, 30-foot-wide vertical access tunnel from ground level to the powerhouse; (6) a vertical intake structure to lead to the tailrace 100 feet

below msl; (7) a 250-foot-long, 200-foot-wide concrete-lined tailrace; and (7) a 2.5-mile-long, 230-kilovolt line extending from the powerhouse to a planned AC–DC converter station. The estimated annual energy production of the project would be approximately 3,250,000 megawatt-hours.
