SUPPLEMENTARY INFORMATION:

Title: FERC-725D, Facilities Design, Connections and Maintenance Reliability Standards.

OMB Control No.: 1902-0247.

Type of Request: Three-year approval of the FERC-725D information collection requirements, with changes to the reporting or recordkeeping requirements. (There are adjustments to the estimates to update the totals to add in the FAC-003-5 and FAC-008-5).

Abstract: On August 8, 2005, The Electricity Modernization Act of 2005, which is Title XII of the Energy Policy Act of 2005 (EPAct 2005), was enacted into law. EPAct 2005 added a new section 215 to the Federal Power Act (FPA), which requires a Commission-certified Electric Reliability Organization (ERO) to develop mandatory and enforceable Reliability Standards, subject to Commission review and approval. Once approved, the Reliability Standards may be enforced by the ERO, subject to Commission oversight, or by the Commission independently. In 2006, the Commission certified NERC (now called the North American Electric Reliability Corporation) as the ERO pursuant to section 215 of the FPA. On March 16, 2007 (pursuant to section 215(d) of the FPA), the Commission issued Order No. 693, approving 83 of the 107 initial Reliability Standards filed by NERC. In the intervening years, numerous changes have been made to

update, eliminate, or establish various Reliability Standards.

The information collected by FERC-725D is required to implement the statutory provisions of section 215 of the Federal Power Act (FPA) (16 U.S.C. 824c). Pursuant to section 215 of the Federal Power Act (FPA),¹ in Order 836,² the Commission approved the following standards: FAC-003-5 is set out to maintain a reliable electric transmission system by using a defense-in-depth strategy to manage vegetation located on transmission rights of way (ROW) and minimize encroachments from vegetation located adjacent to the ROW, thus preventing the risk of those vegetation-related outages that could lead to Cascading. FAC-003-5 is applicable to TOs and GOs and NERC has incorporated Applicability Sections 4.2.2 and 4.3.1.2 of FAC-003-5 to replace references to “elements of an IROL under NERC Standard FAC-014 by the Planning Coordinator” with references to facilities:

“Identified by the Planning Coordinator or Transmission Planner, per its Planning Assessment of the Near-Term Transmission Planning Horizon as a Facility that if lost or degraded are expected to result in instances of instability, Cascading, or uncontrolled separation that adversely impacts the reliability of the Bulk Electric System for a planning event.”

Reliability Standard FAC-008-5 ensures that Facility Ratings used in the reliable planning and operation of the Bulk Electric System (BES) are determined based on technically sound principles. A Facility Rating is essential for the determination of System Operating Limits.

Type of Responses: TO& GO³

Estimate of Annual Burden⁴ and Cost: The Commission estimates an increase (adjustment) in the annual public reporting burden for the FERC-725D. In an effort to target similar NERC Reliability Standards by family the following manhours associated with two FAC (Facilities) Reliability Standards (FAC-008-5 and FAC-003-5) is being transferred from 725A (1902-0244) to the 725D (1902-0247), where other FAC

⁴ Burden is defined as the total time, effort, or financial resources expended by persons to generate, maintain, retain, or disclose or provide information to or for a federal agency. For further explanation of what is included in the information collection burden, refer to 5 Code of Federal Regulations 1320.3.
