II. Background

The purpose of the meeting is to work with a small group of stakeholders to solicit input on the types of information that EPA can provide to help users better understand the Toxics Release Inventory data. One goal in particular is to identify ways that EPA can help users of the data understand the different factors to consider when using the TRI data. To achieve this goal, EPA is interested in identifying documents and/or tools that the Agency can develop to assist a variety of data users in understanding and using the TRI data. In the past there have been issues raised with regard to the definition of "release," particularly with respect to Class I underground injection wells and Resource Conservation and Recovery Act (RCRA) Subtitle C landfills. Some stakeholders believe that the way EPA provides the data to the public leads to an erroneous perception that a reported EPCRA section 313 "release" necessarily results in an actual exposure of people or the environment to a toxic chemical. EPA is interested in obtaining ideas from stakeholders on documents and/or tools needed to assist data users in understanding the context of all types of toxic chemical releases reported under EPCRA section 313.

SUPPLEMENTARY INFORMATION:

EPA issued the Combined Sewer Overflow (CSO) Control Policy in April 1994 (59 FR 18688). To date, EPA has released seven guidance documents and worked with stakeholders to foster implementation of the Policy. The CSO Control Policy calls for the development of a long-term control plan (LTCP), which includes measures that provide for compliance with the Clean Water Act including attainment of water quality standards. The CSO Control Policy provides that the LTCP should be coordinated with the review and revision, as appropriate, of water quality standards and implementation procedures on CSO-impacted receiving waters. This process is intended to ensure that the long-term controls will be sufficient to meet water quality standards (59 FR 18694).

As part of EPA's FY 1999 Appropriation, Congress directed EPA to develop guidance on the conduct of water quality standards and designated use reviews for CSO-receiving waters, and urged EPA to provide technical and financial assistance to States and EPA Regions to conduct these reviews. In response, EPA hosted three stakeholder listening sessions in the Spring of 1999 and an experts workshop on September 24, 1999. The purpose of these meetings was to obtain participants' views on the impediments to implementing the water quality-based provisions in the CSO Control Policy. The guidance addresses many of the stakeholders' concerns, and recommends actions that EPA, State and Interstate Water Pollution Control
