Abstract: The National Land Remote Sensing Education, Outreach and Research Activity (NLRSEORA) is an effort to develop a U.S. nationwide consortium to build the capability to receive, process, and archive remotely-

sensed data for the purpose of providing access to university and state organizations in a ready-to-use format and to expand the science of remote sensing through education, research/applications development, and outreach in areas such as environmental monitoring to include the effects of climate variability on water availability and phenology, natural resource management, and disaster analysis. Respondents are submitting proposals to acquire funding for a national (U.S.) program to promote the uses of space-based land remote-sensing data and technologies through education and outreach at the State and local level and through university-based and collaborative research projects. The information collected will ensure that sufficient and relevant information is available to evaluate and select a proposal for funding. A panel of USGS Core Science Systems Mission Area managers and scientists will review each proposal to evaluate the technical merit, requirements, and priorities identified.

This notice concerns the collection of information that is sufficient and relevant to evaluate and select proposals for funding. We will protect information from respondents considered proprietary under the Freedom of Information Act (5 U.S.C. 552) and its implementing regulations (43 CFR part 2), and under regulations at 30 CFR 250.197, "Data and information to be made available to the public or for limited inspection." Responses are voluntary. No questions of a "sensitive" nature are asked. We intend to release the project abstracts and primary investigators for awarded/funded projects only.
