#### SUPPLEMENTARY INFORMATION:

#### I. Introduction

The NRC is considering a license amendment request for Special Nuclear Materials License Number SNM-2504 for the FSV ISFSI located in Weld County, Colorado (ADAMS Accession Nos.: ML15069A007, ML15084A014, and ML15331A359, respectively). The applicant, the U.S. Department of Energy (DOE) Idaho Operations Office, is proposing to amend Technical Specifications (TS) 3.3.1, "Seal Leak Rate," to revise the response time to complete some of the corrective actions in TS 3.3.1 if the leak rate limit is exceeded. Also proposed is: (i) Addition of Section 5.5.5, "Aging Management Program," to the TS Table of Contents of Appendix A to license SNM-2504, (ii) clarification to language in Item 6 of Section 5.5.2, "Essential Programs Control Program," and (iii) addition of a notation that the license was renewed. The NRC staff has prepared a final EA as part of its review of this proposed license amendment in accordance with the requirements in part 51 of title 10 of the *Code of Federal Regulations* (10 CFR). Based on the final EA, the NRC has determined that a FONSI is appropriate. The NRC is also conducting a safety evaluation of the proposed license amendment pursuant to 10 CFR part 72, "Licensing Requirements for the Independent Storage of Spent Nuclear Fuel, High-Level Radioactive Waste, and Reactor-Related Greater-Than-Class C Waste," and the results will be documented in a separate Safety Evaluation Report (SER). If DOE's request is approved, the NRC will issue

the license amendment following publication of this final EA and FONSI and completion of the SER.

## II. Final Environmental Assessment Summary

The irradiated fuel in the ISFSI is contained in fuel storage containers (FSC), which are sealed with double metal O-ring seals between the FSC body and the lid. TS 3.3.1 in Appendix A of license SNM-2504 requires that the FSC or storage well seal leakage rate not exceed  $1 \times 10^3$  reference cubic centimeters per second (ref-cm<sup>3</sup>/s). The TS requires the licensee to test the leak rate of one FSC from each vault every 5 years. The TS also calls for specific corrective actions to be performed within a specified amount of time if the leak rate limit is exceeded for one or two seals on FSCs or storage wells. If approved, the proposed license amendment would allow DOE to revise the response time to complete the following corrective actions in TS 3.3.1 if the leak rate limit is exceeded: (i) Lengthen the response time for completing corrective actions A.1.1, A.1.2.1, and A.1.2.2 from seven days to 21 days, and (ii) lengthen the response time for completing corrective action A.2 from 30 days to 45 days. In addition, the amendment would include the following changes that are administrative in nature: (i) addition of Section 5.5.5, "Aging Management Program," to the TS Table of Contents of Appendix A to license SNM-2504, (ii) clarification to language in item 6 of section 5.5.2, "Essential Programs Control Program," and (iii) addition of a notation that the license was renewed. As documented in the EA, this portion of the proposed action that includes changes that are administrative in nature meets the categorical exclusion provision in 10 CFR 51.22(c)(11).

The NRC has assessed the potential environmental impacts associated with the proposed action of amending SNM-2504 TS 3.3.1, as well as the no-action alternative, and has documented the results in the final EA (ADAMS Accession No. ML16028A407). The NRC staff performed its environmental review in accordance with the requirements in 10 CFR part 51. In conducting the environmental review, the NRC considered information in the license amendment application; information in the responses to the NRC's requests for additional information (RAIs); and communications with DOE, the Colorado State Historic Preservation Office, the U.S. Fish and Wildlife Service, and the Colorado Department of Public Health and Environment.
