

Conditioning and Heat Pump.” This definition allows for systems with multiple outdoor units and has other differences for systems with nominal cooling capacities greater than 150,000 Btu/h. However, for the waiver under consideration here, which does not apply to systems with multiple outdoor units, nor to systems with cooling capacities greater than 135,000 Btu/h, the only change in the definition of “tested combination” that is relevant is its reference to “capacity” is changed to “nominal cooling capacity.” This does not substantially alter the original definition, but only clarifies it.

IV. Discussion

The Department has reviewed Mitsubishi’s Initial Petition and its request to revise the list of model numbers for which Mitsubishi requested the waiver and interim waiver. The modified model list does not reflect any changes to the models listed in Mitsubishi’s Initial Petition with respect to the properties making them eligible for a waiver, which involved testing difficulties. Given that the modified list does not change in any way the basis for granting the interim waiver, DOE finds that it is appropriate that the interim waiver granted on April 9, 2007, apply to the models listed in the Modified Petition. DOE thus clarifies that the April 9, 2007, interim waiver applies to the models listed in the Modified Petition, and that DOE will use the modified list of model numbers in any future action on the pending Petition for Test Procedure Waiver.

[Project No. 13528–000]

Soule Hydro LLC; Notice of Preliminary Permit Application Accepted for Filing and Soliciting Comments, Motions To Intervene, and Competing Applications

July 13, 2009.

On July 1, 2009, Soule Hydro LLC filed an application pursuant to section 4(f) of the Federal Power Act to study the feasibility of the proposed Soule River Hydroelectric Project No. 13528 located on the Soule River, within the

Ketchikan Recording District, First Judicial District, near Hyder, Alaska. The project would occupy federal lands within the Tongass National Forest. The sole purpose of a preliminary permit, if issued, is to grant the permit holder priority to file a license application during the permit term. A preliminary permit does not authorize the permit holder to perform any land disturbing activities or otherwise enter upon lands or waters owned by others without the owners’ express permission.

The proposed project would consist of: (1) A proposed concrete dam with a maximum height of 160 feet; (2) a proposed storage reservoir with a normal water surface area of 950 acres, an active storage capacity of approximately 60,000 acre-feet, and a gross storage capacity of approximately 74,000 acre-feet; (3) a proposed 12-foot-diameter, 12,000-foot-long penstock; (4) a proposed powerhouse containing 2 generating units with a total installed capacity of 75 megawatts; (5) an open channel tailrace; (6) a 138-kilovolt, 9.72 mile-long submarine cable transmission line connecting to the existing interconnection transmission system in Hyder, and (7) appurtenant facilities. The proposed Soule River Hydroelectric Project would have an average annual generation of 270 gigawatt-hours.
