SUPPLEMENTARY INFORMATION:

I. Abstract

The National Marine Fisheries Service (NMFS) proposes to collect to conduct a one-time census to collect economic, sociocultural, and demographic data

about commercial fishing for wreckfish (*Polyprion americanus*) along the U.S. south Atlantic coast. The wreckfish fishery has been managed with individual transferable quotas (ITQs) since 1992. Few shareholders currently fish for wreckfish, yet they have not sold or leased their shares. This project will address why shareholders chose not to participate in the wreckfish fishery, where and for what species they did fish, and why they did not sell or lease their unused quota to generate revenue even though they did not fish for wreckfish. Equally important is to determine if the process of developing an ITQ system contributed to the rapid increase in fishing effort in the early 1990s. The results of this inquiry could offer important lessons for economists, fishery managers and others researching the appropriateness of applying ITQ systems in other fisheries in the southeast.

II. Method of Collection

Data will be collected through personal interviews with approximately 50 past and current shareholders in the ITQ management system for the wreckfish fishery. Interviews will include open-ended questions so that respondents can put into their own words their thoughts, interpretations and experiences with the fishery and the ITQ management program. All interviews will be tape-recorded and transcribed. Results of the study will be made available both through publications and on a National Marine Fisheries Community Impacts web page. Participation in the study will be voluntary.
