Filing environmental comments will not give you intervenor status, but you do not need intervenor status to have your comments considered. Only intervenors have the right to seek rehearing or judicial review of the Commission's decision. At this point in this proceeding, the timeframe for filing timely intervention requests has expired. Any person seeking to become a party to the proceeding must file a motion to intervene out-of-time pursuant to Rule 214(b)(3) and (d) of the Commission's Rules of Practice and Procedures (18 CFR 385.214(b)(3) and (d)) and show good cause why the time limitation should be waived. Motions to intervene are more fully described at <https://www.ferc.gov/how-intervene>.

Additional information about the project is available from the Commission's Office of External Affairs, at (866) 208-FERC, or on the FERC website (www.ferc.gov) using the eLibrary link. The eLibrary link also provides access to the texts of all formal documents issued by the Commission, such as orders, notices, and rulemakings.

The Commission's Office of Public Participation (OPP) supports meaningful public engagement and participation in Commission proceedings. OPP can help members of the public, including landowners, environmental justice communities, Tribal members and others, access publicly available information and navigate Commission processes. For public inquiries and assistance with making filings such as interventions, comments, or requests for

rehearing, the public is encouraged to contact OPP at (202) 502-6595 or OPP@ferc.gov.

In addition, the Commission offers a free service called eSubscription which allows you to keep track of all formal issuances and submittals in specific dockets. This can reduce the amount of time you spend researching proceedings by automatically providing you with notification of these filings, document summaries, and direct links to the documents. Go to <https://www.ferc.gov/ferc-online/overview> to register for eSubscription.

k. This application has been accepted but is not ready for environmental analysis at this time.

l. The Townsend Project includes: (1) a 450-foot-long and 13-foot-high dam, constructed of rock-filled timber cribs encased in concrete, with a crest elevation 698.63 feet National Geodetic Vertical Datum of 1929 (NGVD29); (2) an approximately 25-acre reservoir with a gross storage capacity of 200 acre-feet at normal water surface elevation of 698.78 feet NGVD29; (3) a short entrance channel excavated in rock near the left dam abutment that directs water to an intake structure with 17-foot-wide trashracks with 5-inch clear bar spacing; (4) a 52-foot-long by 46-foot-wide concrete powerhouse; (5) two double-regulated open-pit type turbine-generator units each rated at 2,500 kilowatts (kW) for a total installed capacity of 5,000 kW; (6) an approximately 230-foot-long tailrace, excavated in rock at a normal tailwater elevation of 681.17 feet NGVD29; (7) a 500-foot-long, 23-kilovolt (kV) transmission line owned by Duquesne Light Company; (8) 4.16-kV generator

leads, a 60-foot-long section of 5-kV underground cable leading to a 4.16/23-kV transformer in an outdoor substation; and (9) appurtenant facilities. The average annual generation was 19,524 megawatt-hours for the period from 2015 to 2019.

The Townsend Project operates in a run-of-river mode with a continuous minimum flow of 304 cubic feet per second (cfs), or inflow, whichever is less. The flow for operating a single unit is 600 cfs and minimum river flow for the project operation is 904 cfs. There is minimal to no available usable storage behind the dam and if river flow is less than 904 cfs, all water is spilled over the dam. The project is typically operated automatically, but manual operation may occur during dynamic high-water events. The project is returned to automatic operation when flow decreases.
