k. *Description of Project:* The proposed Last Chance Energy Project is a closed-loop pumped storage hydropower facility that would consist of: (1) a 1900-foot-long and 50-foot-high dam impounding a 1,250-acre-feet upper reservoir at a full pool elevation of 4,750 feet above mean sea level covering 50 acres; (2) a 3000-foot-long and 50-foot-high dam impounding a 1,875 acre-feet lower reservoir at a full pool elevation of 4,000 feet above mean sea level covering 75 acres; (3) two parallel pipes, each 10-foot-diameter and 6000-foot-long; (4) two vertical shafts, each 10-foot-diameter and 100-foot-high; (5) an approximately 200-foot-long and 25-foot-diameter pump intake tunnel located in the lower reservoir; (4) an approximately 100-foot-wide, 150-foot-long, and 75-foot-tall reinforced concrete and steel powerhouse; (5) four turbines, each with a generating capacity of approximately 75 megawatts (MW); (6) a system of industrial pumps to transfer water from the lower to upper reservoir; (7) a 7.5-mile-long overhead transmission line interconnecting with an existing AEP substation; and (8) appurtenant facilities. The applicant indicates that it would develop groundwater withdrawal wells tapping into the Igneous Aquifer and use the groundwater for the initial fill and make-up water needs.

When a Declaration of Intention is filed with the Federal Energy Regulatory Commission, the Federal Power Act requires the Commission to investigate and determine if the project would affect the interests of interstate or foreign commerce. The Commission also determines whether or not the project: (1) would be located on a navigable

waterway; (2) would occupy public lands or reservations of the United States; (3) would utilize surplus water or water power from a government dam; or (4) would be located on a non-navigable stream over which Congress has Commerce Clause jurisdiction and would be constructed or enlarged after 1935.
