

- up to 147 WTG monopile foundations which would not exceed 11-meters (m) in diameter would be installed using impact hammers with energy level not to exceed 5,225 kiloJoules (kJ). Impact driving would not occur from January 1 through April 30 over the course of 2 years. In addition, impact pile driving would not occur from December 1 through December 31, unless unanticipated delays due to weather or technical problems arise that necessitate extending pile driving into December;

- two OSS jacket foundations with up to 12.5 m (8.2 ft)-diameter pin piles would be installed over 2 years using impact hammers with energy levels not to exceed 3,200 kJ. Impact driving of pin piles would be subject to the same work window restrictions as the WTG monopile foundations;

- installation and removal of up to 5 temporary cofferdams or 6–10 goal posts would occur over 2 years via vibratory driving at the exit points of the long-distance horizontal directional drilling (HDD) at each export cable landfall. Up to 60 sheet piles would be required per cofferdam and installation and removal of each cofferdam would require 6 days;

- using HRG equipment to survey approximately 103,475 (km) over 5 years (177.792 km/day × 582 vessel days between 2024–2028).

Empire has indicated that these are the most accurate estimates for the durations of each planned activity, but that the schedule may shift over the course of the Project due to weather, mechanical, or other related delays.

Information Solicited

Interested persons may submit information, suggestions, and comments concerning Empire's request (see **ADDRESSES**). NMFS will consider all information, suggestions, and comments related to the request during the development of proposed regulations governing the incidental taking of marine mammals by Empire, if appropriate.
