All documents (original and seven copies) should be filed with: David P. Boergers, Secretary, Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426.

k. *Description of Application:* Susquehanna Electric Company (SEC) has requested Commission approval of a variance of the minimum flow requirement of the project license. Due to the rapidly decreasing flows in the Susquehanna River, SEC requests that it be allowed to include plant leakage of about 800 cubic feet per second (cfs) in the required minimum flow discharge until September 14, 2001, or until flow conditions improve where the Conowingo Project no longer requires leakage be included as part of the

minimum flow requirement. According to the license, for the period June 1 to September 14, annually, SEC must provide a minimum flow release (not including leakage) below the dam of 5,000 cfs, or inflow (as measured at the USGS gage at Marietta, PA), whichever is less.

The SEC is concerned about the ability of the Conowingo Project to maintain an adequate pond level and storage capacity during the current low flow period. Maintaining storage is necessary for generation and to ensure an adequate water supply for recreational and consumptive uses of the Conowingo Reservoir to include operation of Peach Bottom Atomic Power Station and Muddy Run Pumped Storage Project. Including plant leakage in the minimum flow discharge will contribute to the maintenance of these project water uses during this low flow period. During the period of the minimum flow variance the SEC will conduct daily monitoring of the Susquehanna River below the project for potential environmental effects. If any abnormal or adverse conditions are observed the SEC will promptly notify the Maryland Department of Natural Resources.
