Agency Forms Undergoing Paperwork Reduction Act Review

The Centers for Disease Control and Prevention (CDC) publishes a list of information collection requests under review by the Office of Management and Budget (OMB) in compliance with the Paperwork Reduction Act (44 U.S.C. Chapter 35). To request a copy of these requests, call the CDC Reports Clearance Officer at (404) 498-1210. Send written comments to CDC, Desk Officer, Human Resources and Housing Branch, New Executive Office Building, Room 10235, Washington, DC 20503. Written comments should be received within 30 days of this notice.

Proposed Project: National Public Health Performance Standards Program State Public Health System Assessment—New—Public Health Practice Program Office (PHPPPO), Centers for Disease Control and Prevention (CDC).

Since 1998, the CDC National Public Health Performance Standards Program has convened workgroups with the National Association of County and City Health Officials (NACCHO), the Association of State and Territorial Health Officials (ASTHO), the National Association of Local Boards of Health (NALBOH), the American Public Health Association (APHA), and the Public Health Foundation (PHF) to develop performance standards for public health systems based on the essential services of public health. In the fall of 2000, CDC conducted field tests with the state public health survey instruments in Hawaii, Minnesota, and Mississippi.

CDC is now proposing to implement a formal, voluntary data collection, based on the lessons learned during field testing, to assess the capacity of state public health systems to deliver the Essential Services of Public Health.

Electronic data submission will be the method of choice when state and territorial health departments complete the public health assessment.

An estimated 33 percent of the 59 state and territorial health departments are expected to participate in the National Performance Standards Program during the first year. In year two, an additional 25 percent and in year three, 22 percent. The total burden hours are estimated to be 720.

Data collection period	Number of respondents	Number of responses per respondent	Average Burden per Response (in hrs.)
Year 1 ...	20	1	15
Year 2 ...	15	1	15
Year 3 ...	13	1	15

Dated: May 21, 2002.

Nancy Cheal,

Acting Associate Director for Policy, Planning, and Evaluation, Centers for Disease Control and Prevention.

Proposed Project: National Hospital Ambulatory Medical Care Survey (NHAMCS) OMB No. 0920-0278—Revision—National Center for Health Statistics, (NCHS) Centers for Disease Control and Prevention (CDC). The National Hospital Ambulatory Medical Care Survey (NHAMCS) has been

conducted annually since 1992 and is directed by the Division of Health Care Statistics, National Center for Health Statistics, CDC. The purpose of the NHAMCS is to meet the needs and demands for statistical information about the provision of ambulatory medical care services in the United States. Ambulatory services are rendered in a wide variety of settings, including physicians' offices and hospital outpatient and emergency departments. The target universe of the NHAMCS is in-person visits made in the U.S. to outpatient departments and emergency departments of non-Federal, short-stay hospitals (hospitals with an average length of stay of less than 30 days) or those whose specialty is general (medical or surgical) or children's general. The NHAMCS was initiated to complement the National Ambulatory Medical Care Survey (NAMCS, OMB No. 0920-0234) which provides similar data concerning patient visits to physicians' offices. The NAMCS and NHAMCS are the principal sources of data on approximately 90 percent of ambulatory care provided in the United States.

The NHAMCS provides a range of baseline data on the characteristics of the users and providers of ambulatory medical care. Data collected include patients' demographic characteristics and reason(s) for visit, and the physicians' diagnosis(es), diagnostic equipment and services, medications, and disposition. These data, together with trend data, may be used to monitor the effects of change in the health care system, for the planning of health services, improving medical education, determining health care work force needs, and assessing the health status of the population.

Users of NHAMCS data include, but are not limited to, congressional offices, Federal agencies such as NIH, state and local governments, schools of public health, colleges and universities, private industry, nonprofit foundations, professional associations, as well as individual practitioners, researchers, administrators, and health planners. Uses vary from the inclusion of a few selected statistics in a large research effort, to an in-depth analysis of the entire NHAMCS data set covering several years. The estimated annualized burden for this data collection is 8,809 hours.
