SUPPLEMENTARY INFORMATION: The pipeline safety regulations at 49 CFR 192.179 require that each point on an onshore gas pipeline in a Class 1 location must be within 10 miles of a sectionalizing block valve, unless in a particular case the RSPA Administrator finds that alternative spacing would provide an equivalent level of safety. This means that the distance between valves in a Class 1 location may not exceed 20 miles. During a recent review of its records, Tuscarora Gas Transmission Company (Tuscarora) discovered that during construction the upstream portions of its pipeline in Lassen County, California, were slightly re-routed to avoid a sensitive environmental habitat. As a result, the spacing between main line valves MLV-
