A preliminary permit does not authorize the permit holder to perform any land-disturbing activities or otherwise enter upon lands or waters owned by others without the owners' express permission.

The proposed project would consist of: (1) a new excavated, diked, asphalt-lined 255-acre upper reservoir having a maximum water surface area of about 200 acres and a total volume of 7,800 acre-feet; (2) an existing lower 338-million cubic foot (7,760 acre-feet) underground reservoir created by previous limestone mining activities; (3) a possible diversion channel around the upper reservoir; (4) an underground powerhouse and appurtenant structures

including six 250-megawatt variable speed, reversible pump turbines; (5) power plant buildings and surface structures; (6) a 7000-foot-long, 28-foot-diameter concrete-lined power tunnel connected to two 2400-foot-long, 17.5-foot-diameter concrete vertical shafts that are connected to the underground powerhouse; (7) an underground transformer gallery; (8) six 235-foot-long, 6.25-foot-diameter steel-and-concrete-lined penstocks; (9) four 345-kilovolt overhead transmission line circuits, 2.4 miles long, arranged in two parallel double circuit tower sets within an existing transmission line corridor located south of the reservoir; and (10) offsite and onsite recreational facilities. The estimated annual generation of the Norton Pump Storage Project would be between 1,300 and 2,000 million kilowatt-hours.
