

existing plans and policies of adjacent local, state, and Federal agencies, to the extent possible.

8. A collaborative approach to public and agency participation will be used throughout the planning process. The Taos RMP Revision planning team will work collaboratively with county, municipal and Tribal governments; other Federal, state and local agencies; interested individuals and groups; and other BLM staff groups.

9. The Economic Profile System (EPS) will be used as one source of demographic and economic data for the planning process. EPS data will provide important baseline data and contribute to estimates of existing and future (projected) social and economic conditions. Socio-cultural and economic analysis will subsequently be performed to identify impacts of the potential management alternatives on the diverse populations within the planning area.

10. As required in the Land Use Planning Handbook H-1610-1, EPS workshops will be conducted with community participants from Santa Fe and Rio Arriba Counties. These workshops will be held to foster strong working relationships with county residents and to share information and perspectives about local economic conditions.

11. The RMP Revision process will foster participation of Native American tribal governments and will provide strategies for protection of cultural resources and traditional cultural practices on public lands.

12. The RMP Revision process will emphasize focused, collaborative work with communities to identify public lands and resources upon which they currently rely and/or will rely in the future. This work will center on identifying current and future land use and land ownership patterns that support communities while meeting BLM's overarching mission and goals, and identifying areas with potential for a modified or new special designation status and associated benefits to local communities, the general public and BLM.

13. The RMP Revision will recognize valid existing rights related to the use of public lands.

The BLM will use an interdisciplinary approach to develop the plan revision in order to consider the variety of resource issues and concerns identified.

Specialists with expertise in the following disciplines will be involved in the planning process: sociology and economics; archaeology; paleontology; lands and realty; outdoor recreation; visual resource management; transportation management; minerals

and geology; vegetation management (including forest and fire ecology); hydrology; soils; wildlife and Threatened and Endangered species management; and fisheries.
