NRC staff for implementing specific parts of the agency's regulations, techniques that the staff uses in evaluating specific problems or postulated accidents, and data that the staff needs in its review of applications for permits and licenses.

The recommendations in this guide describe actions that the staff of the NRC considers acceptable when the number of available electric power sources are less than the number of sources required by the limiting conditions for operation (LCOs) for a facility. This regulatory guide applies to single- and multipleunit plants and is consistent with the improved standard technical specifications (iSTS) (NUREG-1430 through NUREG-1434). The LCOrequired actions and specified completion times referred to in this guide are based on the completion times presented in Regulatory Guide 1.93, Revision 0, "Availability of Electric Power Sources," issued December 1974, which have been incorporated into the required actions in the iSTS.

The recommendations described in this guide are an approach that the NRC staff finds acceptable for satisfying some of the requirements of General design criterion (GDC) 17, "Electric Power Systems," of Appendix A, "General Design Criteria for Nuclear Power Plants," to 10 CFR part 50, "Domestic Licensing of Production and Utilization Facilities."
