The "Technical Guidance for Developing Comprehensive Nutrient Management Plans" is a document intended for use by Natural Resources Conservation Service (NRCS) and conservation partner State and local field staffs, private consultants, landowners/operators, and others that will be developing or assisting in the development of Comprehensive Nutrient Management Plans (CNMP). The purpose of this document is to provide technical guidance, not to establish regulatory requirements, for local, tribal, State, or Federal programs. This technical guidance is not intended as a sole source or reference for developing CNMPs. CNMP is a subset of a conservation plan unique to animal feeding operations. A CNMP is a group of conservation practices and

management activities which, when combined into a system, will help to ensure that both production and natural resource goals are achieved. It incorporates practices to utilize animal manure and organic by-products as a beneficial resource. A CNMP addresses natural resource concerns dealing with nutrient and organic by-products and their adverse impacts on water quality. The objective of a CNMP is to combine management activities and conservation practices into a system that, when implemented, will minimize the adverse impacts of animal feeding operations on water quality.
