

project at the preferred site. The Virginia Department of Environmental Quality requested a separate Consistency Determination be forwarded per regulations governing compliance with the Coastal Zone Management Act. A consistency determination was forwarded in response to the request. The Virginia Department of Environmental Quality concurred telephonically in this determination.

Alternatives evaluated in the EIS included three on-base sites, one off-base site, and no action. Siting criteria for the project included proximity to MCB Quantico to facilitate the relationship with on-base education programs and support functions, ready access to Interstate 95, and suitable size (about 100 acres) and setting appropriate for development of the complex. The preferred alternative, Locust Shade Park, is off-base. Prince William County will convey the property to the Department of the Navy for constructing and operating the Marine Corps Heritage Center.

The preferred alternative, Locust Shade Park, is also the environmentally preferred alternative. An erosion and sediment control plan and storm water management plan would be developed and implemented for the facility to control movement of soils and minimize potential effects to wetlands and water quality. The project will also comply, to the maximum extent practicable, with requirements identified in the Virginia Coastal Resources Management Program. A small wetland that exists near the northwest corner of the site will be avoided in siting project related components. No federally protected species occur on the site. The site does not contain cultural resources listed or eligible for listing on the National Register of Historic Places. A small cemetery is located in the northeast corner of the site. This cemetery will be avoided during construction activities. Construction and operation of the complex will result in an increase of air emissions; however, these emissions are below de minimus levels as identified in the Conformity regulations of the Clean Air Act. Traffic associated with the operation of the Heritage Center would be predominantly attributed to visitors and typically occur outside peak commuter periods. Although significant increases in traffic are projected to occur regardless of whether the Heritage Center is constructed, the addition of related vehicles from operation of the Heritage Center will not significantly add to these increases. All practicable means to avoid or minimize environmental harm from implementing

construction and operation of the Heritage Center have been considered.

After considering the requirements of the Marine Corps, the potential environmental impacts of this action, social and economic concerns, and all comments received during the EIS process, I have determined that the Locust Shade Park site best meets the requirements of the proposed action and select that site as the location for the Marine Corps Heritage Center.
