

Any situation or circumstance that has the potential for safety consequences, but did not result in an adverse safety event is defined as a close call. Knowledge about a close call presents an opportunity to address unsafe work conditions and practices, prevent accidents, contribute to policy making decisions and improve overall safety in the workplace.

BTS collects close call reports submitted by WMATA employees, conducts employee interviews, develop and maintain an analytical database containing reported data and other pertinent information, provides statistical analysis to WMATA, and protects the confidentiality of these data through its own statute (49 U.S.C. 6302) and CIPSEA. Only statistical and non-sensitive information will be made available through publications and reports.

Voluntary reporting of close calls to a confidential system provides a tool to identify and correct weaknesses within WMATA and prevents accidents. Close Call reporting fosters a voluntary, cooperative, non-punitive environment to communicate safety concerns for the greater good. Through the analysis of the data that is reported, WMATA receives information about factors that contribute to unsafe events, which becomes the catalyst to develop new training programs and identify root causes of adverse events. The database also provides researchers with valuable information regarding precursors to safety risks and contributes to research and development of intervention programs aimed at averting accidents and fatalities.

Employees involved in reporting a close call incident are asked to fill out a report and participate in a brief, confidential interview. Employees submit the report electronically to BTS. Participants will be asked to provide information such as: (1) name and contact information; (2) time and location of the event; (3) a short description of the event; (4) contributing factors to the close call; and (5) any other information that might be useful in determining a root cause for such events.

III. Request for Public Comment

BTS requests comments on any aspects of this information collection request, including: (1) the accuracy of the estimated burden of 150 hours detailed in section I; (2) ways to enhance the quality, usefulness, and clarity of the collected information; and (3) ways to minimize the collection burden without reducing the quality of

the information collected, including additional use of automated collection techniques or other forms of information technology.
