TABLE 1—ESTIMATED ANNUAL REPORTING BURDEN [1]—Continued

| 21 CFR section; activity | Number of respondents | Number of responses per respondent | Total annual responses | Average burden per response | Total hours |
|---|---|---|---|---|---|
| Use of veterinary master files during all phases of product development (including product development that precedes the establishment of an INAD file or the submission of a NADA) | 15 | 1 | 15 | 20 | 300 |
| Total | | | 1,022 | | 22,083 |

[1] There are no capital costs or operating and maintenance costs associated with this collection of information.
[2] NADAs and supplements regarding antimicrobial animal drugs that use a recommended approach to assessing antimicrobial concerns as part of the overall preapproval safety evaluation.

Based on a review of the information collection since our last request for OMB approval, we have made no adjustments to our previous estimates. However, as discussed, we have separately estimated the burden of the ''Use of veterinary master files during all phases of product development (including product development that precedes the establishment of an INAD file or the submission of an NADA)'' in table 1, row 10. We base our estimate of the total annual responses for the use of veterinary master files on such uses initiated during calendar year 2018. We base our estimate of the hours per response upon our experience with the respondents' use of veterinary master files. We estimate that the time it takes to compile information and submit it to a veterinary master file will vary from 1 to 50 hours, depending on the complexity of the information; therefore, we are estimating on average the burden per response to be 20 hours. Accordingly, we report an additional 300 burden hours and 15 total annual responses in row 10. We are also correcting several rounding errors that were made in our last request for OMB approval. Correcting these rounding errors reduces our previously reported total burden hours and total responses. Thus, our estimated burden for the information collection reflects a net overall increase of 124 hours and a corresponding increase of 14 responses.
