

Study. The iron status of all of these subjects is well characterized, including measurement of plasma ferritin and soluble transferrin receptor along with hemoglobin/hematocrit. These laboratory values allow each subject to be defined as (1) iron replete, (2) iron deficient without anemia or (3) iron deficiency anemia. The responses to these questions will be correlated with the laboratory test values to determine the relationship between blood donation

and the development of RLS and pica and will establish its prevalence in these populations.

0.37. Follow up Visit: 0.25; and *Estimated Total Annual Burden Hours Requested:* Baseline visit: 866. Follow up Visit: 383. The annualized cost to respondents is estimated at: Baseline Visit: \$15,588, Follow up Visit: \$6,894 (based on \$18 per hour). There are no Capital Costs to report. There are no Operating or Maintenance Costs to report.
