Abstract of Information Available

Based on the information available, human remains representing, at least, one individual has been reasonably identified. No associated funerary objects are present. On June 15, 2020, a member of the public observed human remains in a crevice within the Guano Cave archaeological site located in the Winnemucca Lake area and reported the discovery to Pershing County Sheriff's Office (PCSO) that same day. On June 16, 2020, in conjunction between PCSO, BLM Law Enforcement Officer, and an BLM Archaeologist, the remains were identified as the upper cranium of a skull. Cultural affiliation of these remains were not determined at that time.

The cranium was collected by PCSO and delivered to the Washoe County Regional Medical Examiner's Office on June 16, 2020. The examiner's office identified the remains as human, but could not determine the age, and requested radiocarbon dating testing. The cranium was taken to the University of Nevada, Reno (UNR) on June 20, 2020, for radiocarbon testing. The remains were cataloged by UNR under Forensic Anthropology Report Case 2020-02657 PER. A sample was cut from the left frontal portion of the skull and sent to the Accelerator Mass Spectrometry Laboratory at The Pennsylvania State University for analysis. The sample returned a calibrated radiocarbon date between 6500 and 6310 years before present. After testing was finalized, PCSO passed custody of these remains to the BLM on April 5, 2022.
