

various characteristics of migratory bird populations. The North American Woodcock Singing-Ground Survey is an essential part of the migratory bird management program. This survey is conducted annually by State and Federal conservation agencies to provide the necessary data to determine the population status of the woodcock. In addition, the information is vital in assessing the relative changes in the geographic distribution of the woodcock. The information is used primarily by us to develop recommendations for hunting regulations. It is also used by us, State conservation agencies, University associates and other interested parties for various research and management projects. Without information on the population's status, we might promulgate hunting regulations that were too liberal thus causing harm to the woodcock population, or too conservative, thus unduly restricting recreational opportunities afforded by woodcock hunting.
