DEPARTMENT OF HEALTH AND HUMAN SERVICES

Agency for Toxic Substances and Disease Registry

[30Day-24-0051]

Agency Forms Undergoing Paperwork Reduction Act Review

In accordance with the Paperwork Reduction Act of 1995, the Agency for Toxic Substances and Disease Registry (ATSDR) has submitted the information collection request titled “Assessment of Chemical Exposures (ACE) Investigations” to the Office of Management and Budget (OMB) for review and approval. ATSDR previously published a “Proposed Data Collection Submitted for Public Comment and Recommendations” notice on June 25, 2024, to obtain comments from the public and affected agencies. ATSDR received one comment related to the previous notice. This notice serves to allow an additional 30 days for public and affected agency comments.

ATSDR will accept all comments for this proposed information collection project. The Office of Management and

Budget is particularly interested in comments that:

(a) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(b) Evaluate the accuracy of the agencies estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

(c) Enhance the quality, utility, and clarity of the information to be collected;

(d) Minimize the burden of the collection of information on those who are to respond, including, through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses; and

(e) Assess information collection costs.

To request additional information on the proposed project or to obtain a copy of the information collection plan and instruments, call (404) 639-7570.

Comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function. Direct written comments and/or suggestions regarding the items contained in this notice to the Attention: CDC Desk Officer, Office of Management and Budget, 725 17th Street NW, Washington, DC 20503 or by fax to (202) 395-5806. Provide written comments within 30 days of notice publication.

Proposed Project

Assessment of Chemical Exposures (ACE) Investigations (OMB Control No. 0923-0051, Exp. 10/31/2024)—Revision—Agency for Toxic Substances and Disease Registry (ATSDR).

Background and Brief Description

The Agency for Toxic Substances and Disease Registry (ATSDR) is requesting to revise the Assessment of Chemical Exposures (ACE) Investigations information collection project and seeks a three-year OMB approval to assist state and local health departments after toxic substance spills or other acute environmental incidents. The current OMB approval for this information collection expires 10/31/2024. ATSDR has successfully completed three

investigations to date. With the uses of this valuable mechanism, ATSDR would like to continue this impactful information collection. See below for a brief summary of information collections approved under this tool:

- During 2015, in U.S. Virgin Islands there was a methyl bromide exposure at a condominium resort. Under this ACE investigation, awareness among pest control companies that methyl bromide is currently prohibited in homes and other residential settings. Additionally, clinicians were made aware of the toxicologic syndrome caused by exposure to methyl bromide and the importance of notifying first responders immediately when they have encountered contaminated patients.

- During 2016, ACE Investigations teams conducted a rash investigation in Flint, Michigan. Persons exposed to Flint municipal water who had current or worsening rashes surveyed were referred too free dermatologist screening if desired. Findings revealed that when the city was using water from the Flint River, where there were large swings in chlorine, pH, and hardness, which could be one possible explanation for the eczema-related rashes.

- During 2016, ACE Investigations teams also conducted a follow-up investigation for people who were exposed to the Flint municipal water and sought care from the free dermatology exam. The follow-up interviews resulted in improving the exam and referral processes that were still ongoing at the time.

ACE Investigations have focused on performing rapid epidemiological assessments to assist state, regional, local, or tribal health departments (the requesting agencies) to respond to or prepare for acute environmental incidents. The main objectives for performing these rapid assessments are to:

- Characterize exposure and acute health effects of the affected community to inform health officials and the community;

- Identify needs (i.e., medical, mental health, and basic) of those exposed during the incidents to aid in planning interventions in the community;

- Determine the sequence of events responsible for the incident so that actions can be taken to prevent future incidents;

- Assess the impact of the incidents on the emergency response and health services used and share lessons learned for use in hospital, local, and state planning for environmental incidents; and

- Identify cohorts that may be followed and assessed for persistent
