

Administration's Southwest Fishery Science Center operates an angler-based billfish tagging program. Tagging supplies are provided to volunteers. When they catch and tag fish, they submit a brief report on the fish tagged and the location of tagging. The information obtained is used in conjunction with tag returns to determine billfish migration patterns, mortality rates, and similar information useful in the management of the fishery.

Affected Public: Individuals or households.

Frequency: On occasion.

Respondent's Obligation: Voluntary.

Number of Respondents: 3,740.

Average Hours Per Response: 20 minutes to respond to a mail survey; 5 minutes to respond to a follow-up phone survey.

Affected Public: Individuals or households.

Frequency: One-time.

Respondent's Obligation: Voluntary.

SUPPLEMENTARY INFORMATION:

I. Abstract

Given the rapid demographic changes experienced in recent years and the strong expectation that such changes will continue and accelerate, the once-a-decade data collection approach of a decennial census is no longer acceptable. To meet the needs and expectations of the country, the Census Bureau developed the American Community Survey. This survey will collect long-form data every month and provide tabulations of these data on a yearly basis. In the past, the long-form data were collected only at the time of each decennial census. The American Community Survey will allow the Census Bureau to remove the long form from the 2010 Census, thus reducing operational risks, improving accuracy, and providing more relevant data. After years of development and testing, the American Community Survey is ready for full implementation in FY 2003.

The American Community Survey will provide more timely information for critical economic planning by governments and the private sector. In the current information-based economy, federal, state, tribal, and local decisionmakers, as well as private business and nongovernmental organizations, need current, reliable, and comparable socioeconomic data to chart the future. The American Community Survey will provide up-to-date profiles of American communities every year beginning in 2004, providing policymakers, planners, and service providers in the public and private sectors with information every year—not just every ten years.

The American Community Survey must begin full implementation in 2003 to provide comparable data at the census tract level by July 2008. These data are needed by federal agencies and others to provide assurance of long-form type data availability before eliminating the long form from the 2010 Census.

The American Community Survey demonstration period began in 1996 in four sites. In 1999, the number of sites was increased to 31 comparison sites. The comparison with Census 2000 was designed to collect several kinds of information necessary to understand the differences between data from the 1999-2002 American Community Survey and
