

coli will be determined using a standard pre-measured Hach test kit. In addition, community water sources and water samples within the distribution system will be sampled (n=32). A total of 320 water samples will be completed. Additional testing will include measuring free chlorine in the community water system if chlorine is being used (n=16).

Lastly, an infrastructure evaluation for each community will be done by CDC personnel using a checklist. This evaluation will help to determine the strengths and weaknesses of the water and sanitation systems for each community.

The infrastructure survey and water sampling activity is not included in the burden table as CDC will complete this

survey and activity independent of input or assistance from community leaders or study participants.

There is no cost to respondents to participate in the sustainability evaluation other than their time. The total estimated annual burden hours are 240.
