

material is resistant to biofouling and leaching and the CuPod design includes mesh entry panels that prevent fish escapes.

The array's CuPod and vessel would each have a GPS navigation unit to provide location information in the unlikely case of separation from the mooring. In addition to the applicant's monitoring of the array and surrounding waters, the conditions of the NMFS permit would include requirements for avoiding and reporting protected resources interactions, preventing fish escapes and methods of discarding of dead fish, filing harvest and transshipment reports, and accommodating an observer upon request. These operational features, together with the limited scale and duration of the project, resulted in a preliminary determination that the project would have a very limited impact on the environment.

NMFS expects that the array will aggregate pelagic fish. Fishermen would be able to fish around the array. The small size of the array is not expected to have a large adverse impact on catches by other fishermen in the ocean in west Hawaii.

Kampachi Farms must also obtain a Department of the Army permit from the U.S. Army Corps of Engineers for the proposed mooring. NMFS prepared this draft EA with input and review by the U.S. Army Corps of Engineers. When finalized, the EA will serve as the basis for NMFS to determine whether or not the activity would be a major federal action with the potential for significant environmental impacts. If determined to have major impacts, NMFS would need to prepare an environmental impact statement. The EA will also inform NMFS in its decision about whether to issue the special permit. The U.S. Army Corps of Engineers will use this EA to inform the preparation of its own environmental evaluation in accordance with its internal procedures.
