Proposed Data Collections Submitted for Public Comment and Recommendations

In compliance with the requirement of section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 for opportunity for public comment on proposed data collection projects, the Centers for Disease Control and Prevention (CDC) will publish periodic summaries of proposed projects. To request more information on the proposed projects or to obtain a copy of the data collection plans and instruments, call 404-639-5960 and send comments to Maryam I. Daneshvar, CDC Acting Reports Clearance Officer, 1600 Clifton Road, MS-D74, Atlanta, GA 30333 or send an e-mail to omb@cdc.gov.

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Written comments should be received within 60 days of this notice.

Proposed Project

Occupational Injuries and Illnesses Among Emergency Medical Services (EMS) Workers: A NEISS-Work Telephone Interview Survey—New—National Institute for Occupational Safety and Health (NIOSH), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

Studies have reported that EMS workers have higher rates of non-fatal

injuries and illnesses as compared to the general worker population. As EMS professionals are tasked with protecting the health of the public and treating urgent medical needs, it follows that understanding and preventing injuries and illnesses among EMS workers will have a benefit reaching beyond the workers to the general public.

As mandated in the Occupational Safety and Health Act of 1970 (Pub. L. 91-596), the mission of NIOSH is to conduct research and investigations on occupational safety and health. Related to this mission, the purpose of this project is to conduct research that will provide a detailed description of non-fatal occupational injuries and illnesses incurred by EMS workers. This project will bridge a gap of limited existing EMS worker injury and illness surveillance identified in a 2007 National Highway Traffic Safety Administration, (NHTSA) report. The project will use two related data sources. The first source is data abstracted from medical records of EMS workers treated in a nationally stratified sample of emergency departments. These data are routinely collected by the occupational supplement to the National Electronic Injury Surveillance System (NEISS-Work). The second data source, for which NIOSH is seeking OMB approval, is responses to telephone interview surveys of the injured and ill EMS workers identified within NEISS-Work.

The proposed telephone interview surveys will supplement NEISS-Work data with an extensive description of EMS worker injuries and illnesses, including worker characteristics, injury types, injury circumstances, injury outcomes, and use of personal protective equipment. Previous reports describing occupational injuries and illnesses to EMS workers provide limited details on specific regions or sub-segments of the population and many are outdated. As compared to these earlier studies, the scope of the telephone interview data will be broader as it includes sampled cases nationwide and has no limitations in regards to type of employment (i.e., volunteer versus career). Results from the telephone interviews will be weighted and reported as national estimates.

The sample size for the telephone interview survey is estimated to be approximately 175 EMS workers annually for the proposed four year duration of the study. This estimate is based on the number of EMS workers identified in previous years of NEISS-Work data and a 50% response rate that is comparable to the rate of previously conducted National Electronic Injury
