Description: The standard on Additional Requirements for Special Dipping and Coating Operations, (29 CFR 1910.126(g)(4)), requires employers to post a conspicuous sign near each piece of electrostatic-detecting equipment that notifies employees of the minimum safe distance they must maintain between goods undergoing

electrostatic detearing and the electrodes or conductors of the equipment used in the process. Doing so reduces the likelihood of igniting the explosive chemicals used in electrostatic-detecting operations.

OSHA has determined that where electrostatic equipment is being used, the information has already been ascertained and that the "safe distance" has been displayed on a sign in a permanent manner. OSHA has had discussions with individuals familiar with the use of this equipment, leading the Agency to believe that this equipment is no longer being manufactured or used due to changes in technology. OSHA does not believe there is any burden associated with the information collection requirement in the provision and is, therefore, estimating zero burden hours and no cost to the employer.
