SUPPLEMENTARY INFORMATION:

Abstract of patent application(s):

A method for cyber security monitor includes monitoring a network interface that is input-only configured to surreptitiously and covertly receive bit-level, physical layer communication between networked control and sensor field devices. During a training mode, a baseline distinct native attribute (DNA) fingerprint is generated for each networked field device. During a protection mode, a current DNA fingerprint is generated for each networked field device. The current DNA fingerprint is compared to the baseline DNA fingerprint for each networked field device. In response to detect at least one of RAA and PAA based on a change in the current DNA fingerprint to the baseline DNA fingerprint of one or more networked field devices, an alert is transmitted, via an external security engine interface to an external security engine.

Application No. 16/886,874, filed 29 May 2020 and entitled *Passive Physical Layer Distinct Native Attribute Cyber Security Monitor*.

The Department of the Air Force may grant the prospective license unless a timely objection is received that sufficiently shows the grant of the license would be inconsistent with the Bayh-Dole Act or implementing regulations. A competing application for a patent license agreement, completed in compliance with 37 CFR 404.8 and received by the Air Force within the period for timely objections, will be treated as an objection and may be considered as an alternative to the proposed license.

Authority: 35 U.S.C. 209; 37 CFR 404.

Acting Air Force Federal Register Liaison Officer.

[Docket No. CP23-375-000]

Elba Liquefaction Company, LLC; Southern LNG Company, LLC; Notice of Application for Amendment and Establishing Intervention Deadline

Take notice that on April 28, 2023, Elba Liquefaction Company, LLC (ELC), and Southern LNG Company, LLC (SLNG), 569 Brookwood Village, Suite 749, Birmingham, Alabama 35209, filed an application under section 3(a) of the Natural Gas Act (NGA) requesting an amendment to its June 1, 2016 Order¹ (2016 Order) to modify certain Movable Modular Liquefaction System (MMLS) Dehydration and Heavies Removal units that will reduce the fouling rate in the liquefaction units, reduce the resultant flaring events associated with cold box deriming, and therefore allow the MMLS to operate in an optimized condition for longer periods of time without fouling. Accordingly, this project is referred to as the Elba Liquefaction Optimization Project.

Specifically, ELC and SLNG request authorization to (1) make modifications to ten (10) MMLS units; (2) construct and operate a new condensate plant; (3) install three (3) new liquid nitrogen vaporizers; and (4) increase the total liquefaction capacity of the MMLS units up to approximately 2.9 MTPA from 2.5 MTPA (0.0553 Bcf/d).
